ACCURIDE LINEAR TRACK SYSTEMS

Accuride linear track systems use lightweight, corrosion-resistant aluminum tracks and recirculating ball carriages to guide, move, or position screens, panels, and partitions. Adaptable in many ways, you'll find our systems in industrial, commercial, medical, and institutional environments.

Common Features & Benefits

• Multiple mounting methods

The track may be side, flat, or vertically mounted.

- When flat mounted, track may be oriented with the ball carriage facing up or down.
- Vertical mounting for non-load bearing applications.

• Two re-circulating ball carriage options

- Stainless steel ball bearings: provides the greatest load capacity.
- Polymer ball bearings: grease-free with smooth and quiet movement.

• Multiple carriages may be inserted into tracks

- Carriages may be used separately to provide independent movement, combined as a unit, or both methods within one track.

115RC

For light- and medium-duty applications

• Aluminum track available in two lengths: 47" and 94"

- Corrosion-resistant track may be cut to the desired length. Available with or without pre-drilled holes.
- Multiple lengths of track can be butted together to extend the track to any distance required.

• Load Capacity up to 265 lbs. [120kg]

• Easy Installation

Tracks have drilling marks for fixing holes and end stops.

- End stops are attached after the carriages are inserted to contain carriages.
- Tracks with and without fixing holes.
