## **NEW Accuride Linear Motion System 0118RC**

If you need a stylish way to maximise kitchen worktop space or a sliding door which requires little effort to be opened, then the Accuride linear motion tracks are the perfect product.

The compact design of the linear motion guide makes the product perfect for applications where space is restricted. Designed with sliding doors in mind, the DA0118RC linear motion guide has a compact design & a safety feature which ensures that even when too much load is applied, the carriage will remain secure.

For cabinet hardware applications & benchtops with a load rating of less than 100kg we would recommend our DA0115-RC linear guide. And for heavier applications of up to 600kg, we can offer the DA0116RC linear guide.

Medium Duty Aluminium Linear Motion Track with Recirculating Ball Carriage DA0115-RC for up to 100kg. Stainless steel option for up to 30kg.
